

RotaHugger™

Product Overview

The RotaHugger™ is a strap that allows for positioning a child's limbs in proper alignment. This is achieved by wrapping the strap snugly to create rotation where it is needed. Once the RotaHugger™ is positioned so the child's limb(s) achieve(s) proper anatomical alignment, the child can move in a more efficient and natural manner. Exercise practice using the RotaHugger™ allows the child's muscle to develop and function in an efficient manner.

Material and Dimensions

The RotaHugger™ is a 6 foot long and 2 inch wide, black elastic band.
